

FleetSpark × Kiira Motors — Pilot Proposal

Date: June 11, 2026

Prepared by: SyncSphere LLC

Status: Draft — For Cliff's review before outreach

Executive Summary

SyncSphere LLC proposes a **free 90-day pilot** of FleetSpark — an EV Fleet Management Platform — with Kiira Motors Corporation. FleetSpark will give Kiira Motors real-time visibility into their fleet of 24 Kayoola EVS electric buses, including battery health monitoring, GPS tracking, trip history, and maintenance scheduling. The pilot aligns with Uganda's National E-Mobility Strategy and Kiira Motors' position as Africa's leading electric bus manufacturer.

Cost to Kiira Motors: \$0 (free pilot)

Commitment: Feedback sessions at 30 and 60 days, case study permission at 90 days

About SyncSphere LLC

SyncSphere LLC is a US-based digital services company specializing in:

- Open-source software deployment
- Custom web application development
- Fleet management solutions
- Digital infrastructure for East African markets

The Challenge We Solve

Kiira Motors has built Uganda's first electric buses — the Kayoola EVS. As you scale to:

- **24 buses** currently deployed in Greater Kampala Metropolitan Area
- **450-bus export order** from South Africa
- Target capacity of **500,000 vehicles/year by 2030**

...you need a fleet management system that matches your ambition.

Current pain points (our assumptions — to be validated):

1. **No real-time fleet visibility** — Where are your buses right now? Are they running on schedule?
2. **Battery uncertainty** — Which buses need charging? Which batteries are degrading?
3. **Maintenance tracking** — Are you doing preventive maintenance or reactive repairs?
4. **Operational data** — How far are your buses traveling? What's the cost comparison vs diesel?
5. **Reporting to stakeholders** — Government, investors, and export customers need data

FleetSpark solves all of these.

What FleetSpark Does

During the Pilot (90 Days)

Module 1: Live Fleet Dashboard

- See all 24 buses on a real-time map
- Know which bus is in transit, charging, idle, or needs attention
- No manual check-ins required

Module 2: Battery Health Monitoring

- Track State of Health (SoH) for every bus battery
- Predict when batteries need replacement
- Monitor charging sessions and energy consumption
- Get alerts when battery drops below your threshold

Module 3: Trip & Route Tracking

- Automatic trip detection (start/stop)
- Distance, duration, and speed per trip
- Route visualization on the map
- Historical trip data export

Module 4: Maintenance Scheduling

- Schedule preventive maintenance by date or odometer
- Maintenance history per bus
- Alerts when service is due

Module 5: Alerts & Notifications

- Low battery alerts
- Vehicle offline alerts
- Maintenance due alerts
- Configurable notification channels (email, SMS, in-app)

Module 6: Reports & Analytics

- Fleet utilization (% of time buses are active)
- Total distance covered
- Estimated fuel cost savings vs diesel buses
- CO₂ emissions reduced
- Export-ready PDF and CSV reports

What the Dashboard Looks Like

A clean, simple web application accessible from any device:

- Desktop (full dashboard with map + vehicle list)
- Tablet (optimized layout)
- Mobile phone (essential info at a glance)

No app installation required — runs in the browser.

Pilot Scope

What's Included (Free)

Item	Details
FleetSpark platform access	Full dashboard for up to 30 vehicles
User accounts	Up to 10 users (fleet managers, mechanics, executives)
GPS data integration	Connection to existing telematics OR manual entry
Battery monitoring	Level, SoH, charging session tracking
Email support	Response within 24 hours on business days
Two feedback sessions	30-day and 60-day check-in calls
Data export	CSV export of all data at pilot end

What's NOT Included (Post-Pilot)

Item	Post-Pilot Pricing
Continued platform access	\$500–2,000/mo (based on fleet size)
SMS notifications	Pay per SMS (~\$0.05/SMS)
Custom integrations	Project-based
White-label / rebranding	Enterprise plan
API access for third-party integrations	Growth plan

What We Need from Kiira Motors

1. **Single point of contact** — Fleet manager or operations lead
 2. **Vehicle details** — Name, plate number, battery capacity, max range for each bus
 3. **GPS telematics info** — What devices (if any) are installed on the buses? Brand/model?
 4. **Feedback** — Honest assessment at 30 and 60 days
 5. **Case study permission** — At 90 days, permission to use results in our marketing (with approval)
-

Pilot Timeline

Week	Activity
Week 1	Kickoff call. Gather vehicle data. Set up FleetSpark account.
Week 2	Configure vehicles in the system. Set up GPS integration (or manual entry). Train Kiira team.
Week 3-4	Go live. All 24 buses visible on dashboard. Daily monitoring begins.
Week 4	30-day feedback session. What's working? What needs improvement?
Week 5-8	Continued operation. Bug fixes. Feature adjustments based on feedback.
Week 8	60-day feedback session. Review data collected. Discuss ROI.
Week 9-12	Final phase. Generate pilot summary report.
Week 12	90-day review. Present results. Discuss next steps (paid deployment or handoff).

Expected Outcomes

By the end of the 90-day pilot, Kiira Motors will have:

Operational Visibility

- ☐ Know where every bus is, in real-time
- ☐ Know which bus needs charging — before it runs out
- ☐ Know which battery is degrading — before it fails
- ☐ Know which bus is due for maintenance

Data & Reporting

- ☐ Total distance covered by fleet and per bus
- ☐ Fuel cost savings (UGX) vs equivalent diesel fleet
- ☐ CO₂ emissions reduced (kg)
- ☐ Fleet utilization rate (%)
- ☐ Export-ready reports for stakeholders and investors

Decision-Ready

- ☐ Data to inform battery replacement decisions
- ☐ Data to optimize charging schedules
- ☐ Data to plan for the 450-bus export order
- ☐ Proof-of-concept for government reporting (National E-Mobility Strategy)

About the Technology

FleetSpark is built with modern, reliable technology:

- **Web-based** — Works on any device with a browser. No app to install.
 - **Real-time** — GPS location updates every 30 seconds
 - **Secure** — Encrypted data, role-based access, daily backups
 - **Hosted** — Cloud servers with 99.5% uptime. You don't manage any infrastructure.
 - **Built for Africa** — Works on 3G connections. Mobile-optimized. Low data usage.
-

Why This Pilot is Free

SyncSphere is launching FleetSpark in East Africa. We need:

1. **A reference customer** — Kiira Motors is the ideal first client (high-profile, government-backed, scaling fast)
2. **Real-world validation** — Your 24-bus fleet is the perfect test environment
3. **A case study** — With your permission, we'll document results to attract other fleet operators across East Africa

This is a **partnership**, not charity. You get a free system. We get a launch customer.

Next Steps

For Kiira Motors

1. **Review this proposal internally** — Fleet manager, operations head, management
2. **Identify a point of contact** — Who would lead this on your side?
3. **Schedule a 30-minute call** — We'll walk through FleetSpark, answer questions, and finalize pilot scope

The Call Agenda (30 minutes)

- Introductions
 - Kiira Motors' current fleet management approach (5 min)
 - FleetSpark demo (15 min)
 - Pilot scope discussion (5 min)
 - Next steps (5 min)
-
